

# Using Mobile Services to Increase Access to Medications for Addiction Treatment

**Carolina Close, MA; Donna B. Goldstrom, LPC, LAC; Tara Kerner, DO; Camara A. Wooten, BA**

Prepared for ASAM Virtual.2021

Friday April 23, 2021

3:15 PM – 4:15 PM

# Disclosure Information

- ☀ Presenter 1: Carolina Close, MA
  - ☀ No Disclosures
- ☀ Presenter 2: Donna B. Goldstrom, LPC, LAC
  - ☀ No Disclosures
- ☀ Presenter 3: Tara Kerner, DO
  - ☀ No Disclosures
- ☀ Presenter 4: Camara A. Wooten, BA
  - ☀ No Disclosures

# Learning Objectives

- ☀ Describe mobile service approaches that can increase access to medications for addiction treatment (MAT)
- ☀ Compare mobile service approaches based on several implementation characteristics
- ☀ Identify barriers and facilitators that may influence program implementation and replication

# Background

- ☀️ MAT is an effective treatment option for opioid use disorder (OUD)<sup>1,2</sup>
- ☀️ Although 1.6 million people aged 12+ had a past-year OUD in 2019, less than 20% received MAT<sup>3</sup>
- ☀️ Mobile services can help increase access to MAT
- ☀️ Communities are implementing multiple different service approaches
- ☀️ RTI conducted key informant interviews with several mobile MAT programs

# Key Informant Interviews

## Colorado

3 health care providers operating mobile units in 31 counties.<sup>4</sup>

Agency: Colorado Department of Human Services, Office of Behavioral Health.

## New York

20 Centers of Treatment Innovation bringing mobile treatment to 35 counties.<sup>5,6,7</sup>

Agency: New York State Office of Addiction Services and Supports.

## New York City

Methadone delivery program for 4 of the 5 boroughs.

Agency: New York City Department of Health and Mental Hygiene

# Key Informant Interviews, *continued*

## **New Haven County, Connecticut**

Mobile Addiction Treatment Team, or M.A.T.T.'s Van, serving cities of New Haven, West Haven, and Milford.  
Agency: Bridges Healthcare.

## Mobile Treatment for Opioid Use Disorder: Examples From the Field—Part I

---

### Introduction

Various state and local jurisdictions in the United States are implementing mobile models for treating opioid use disorder (OUD). In August 2020, RTI International spoke with six agencies to learn more about their mobile treatment programs. This article is the first in a three-part series on mobile response programs and provides an in-depth look at two of these programs. We will discuss the remaining programs in two subsequent articles. The goal of this series is to inform jurisdictions considering whether a mobile treatment program would work in their communities and to determine what type of model would fit best.

The first mobile model is an induction-only program that prescribes Suboxone (buprenorphine/naloxone). (Induction is the process of initial dosing with medication for OUD treatment; for more information, click [here](#).) This model is implemented by Bridges Healthcare, a state-designated Local Mental Health Authority in Connecticut. The second mobile model is a methadone delivery program that was created because of COVID-19. It was implemented by the New York City Department of Health and Mental Hygiene (NYC Health) in partnership with the New York State Office of Addiction Services and Supports (OASAS).

### Bridges Healthcare's Mobile Addiction Treatment Team

The Mobile Addiction Treatment Team, or M.A.T.T.'s Van, was created by Bridges Healthcare to expand access to Suboxone in Connecticut. Before launching the mobile treatment unit over a two-year period, the organization implemented various changes at its brick-and-mortar clinic that were intended to remove barriers to treatment for OUD.

New Haven County,  
Connecticut

# MAT on Wheels In Rural Colorado

Donna Goldstrom, LPC, LAC

# Mobile Health Units (MHUs)

- ◆ Substance Abuse and Mental Health Services Administration grant through the Colorado Office of Behavioral Health
- ◆ Total of 6 MHUs throughout the state from 3 different agencies
- ◆ Front Range Clinic manages 4 MHUs out of our brick-and-mortar clinics in Pueblo, Colorado Springs, Greeley, and Grand Junction

# Outreach Efforts

- ◆ Two-fold
  - ◆ Building relationships within the community
  - ◆ Finding parking for a 34-foot mobile unit
- ◆ Contacted various providers and agency types at the local level:
  - ◆ Medical
  - ◆ Behavioral health
  - ◆ Law enforcement
  - ◆ Support services
  - ◆ Government agencies
  - ◆ Pharmacies

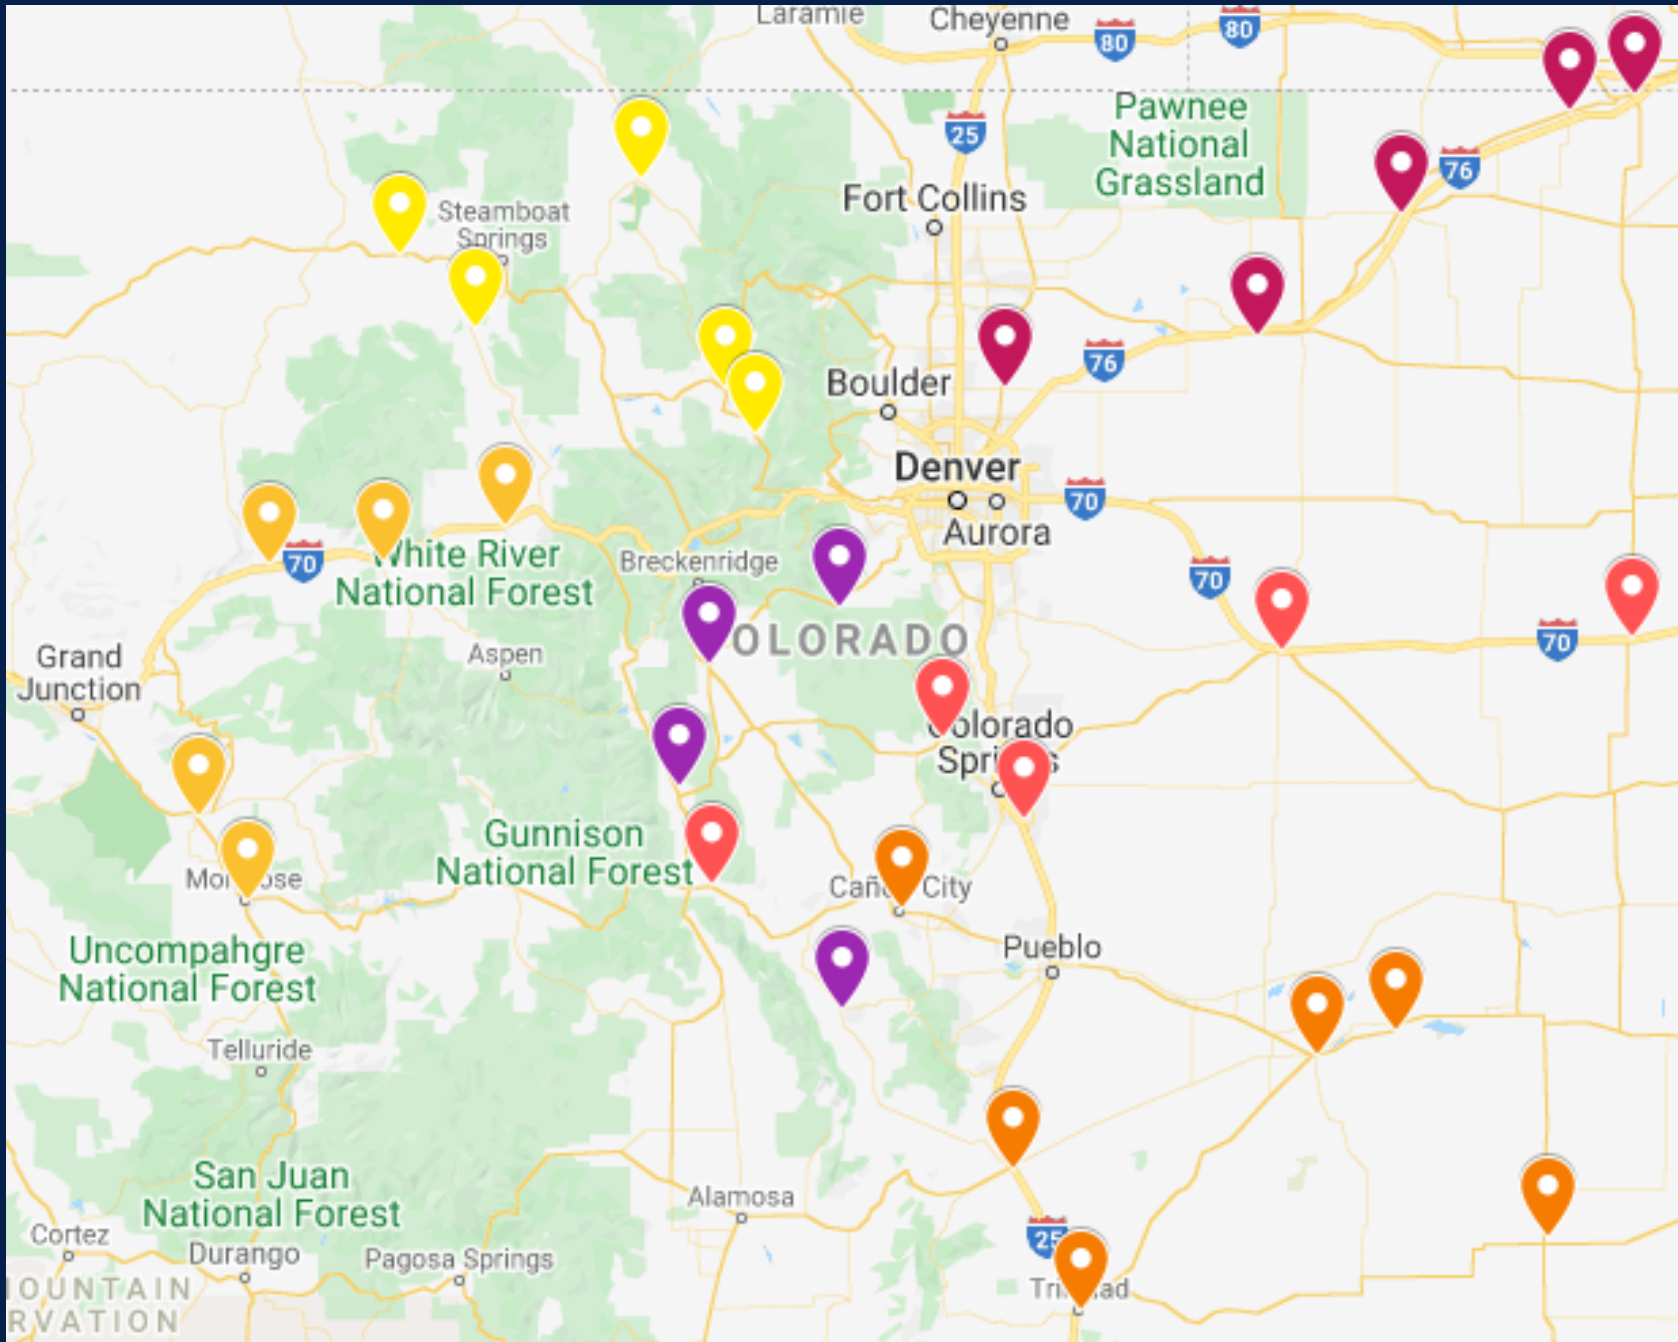

# Addition of SUV

- Proposed the utilization of SUVs on routes with difficult terrain
- Use the pop-up clinic model to provide services
  - Additional peer time possible
  - LPN can be used as a float when there is a need for shot administration
  - Medical Provider & CAC II can be accessed via telehealth
- SUV is easier to navigate in mountainous region
  - Less maintenance on the vehicle
  - Easier to manage mechanical mishaps while on the road

# MHU Route Map

# Colorado Terrain

# MHU & Terrain

# Capacity

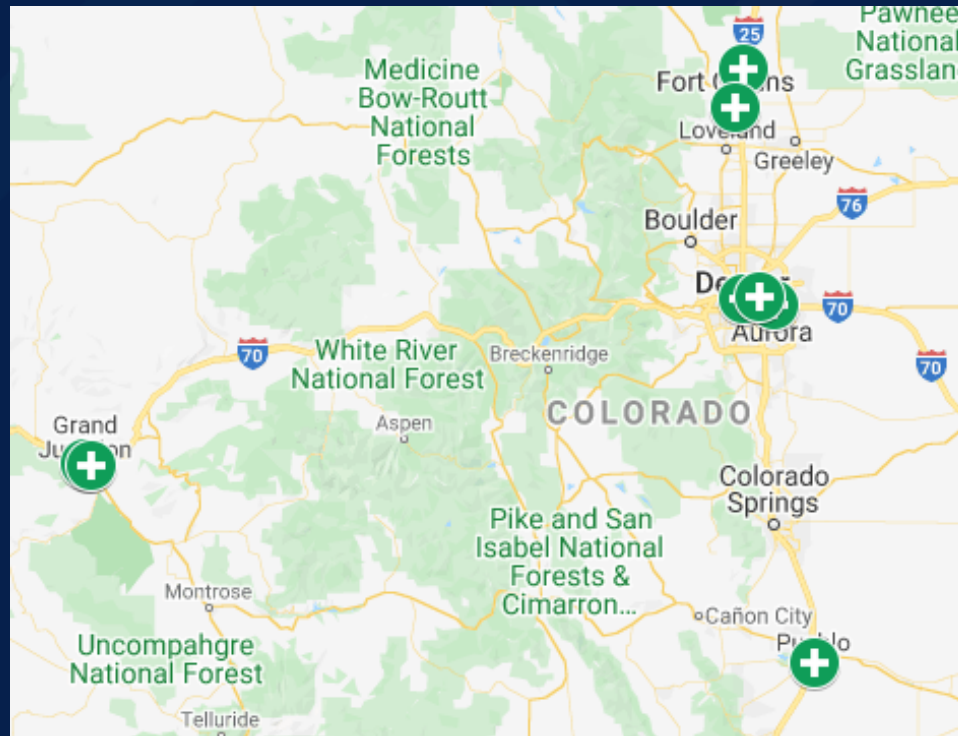

- MHU is staffed with 3 individuals:
  - Nurse (LPN)
  - Counselor (CAC II)
  - Peer Support Specialist
- The MHU Layout:
  - A front desk
  - A room for counseling
  - A bathroom with pass-through
  - A medical room

# Pop-Up Clinic Model

Through established and developed relationships, we utilize the space of other agencies

A peer or administrative staff member goes to the location and connects to a provider via telehealth

# Services Provided

Telehealth: Medical and counseling

Peer support

Medications: Vivitrol, Rx for Buprenorphine

Data for grant

Fraser

# COVID-19 Challenges

Challenges on mobile routes  
abound, including:

- Public venues hosting pop-up clinics
- Pop-ups may close on short notice
- One patient on MHU at a time
- Symptom screening
- Wearing masks

# MHU Data

As of February 26th, 2021, the mobile units have seen:

143 unique clients for MAT inductions

385 unique clients for MAT maintenance

238 unique clients for wraparound services/referrals to other supports/services

# Sustainability

- ◆ Utilization of telehealth allows for counseling across the clinic, not just on the MHU
- ◆ MHU can be run efficiently by two staff

# Successes & Challenges

- ◆ Finding a pop-up/parking
- ◆ Stigma in rural communities
- ◆ Rural patient transportation
- ◆ Telehealth acceptance in BH with COVID-19
- ◆ Mechanical issues with MHU
- ◆ Connectivity in rural areas
- ◆ Lack of pharmacy
- ◆ Collaboration with state and local entities
- ◆ Patient story

# What did we do about it?

#ASAM2021

Was all this enough?

# Barriers Still Existed

- ✦ Patients have to call for an appointment and wait for intake
- ✦ Patients are...
  - ✦ afraid they will be judged
  - ✦ afraid of legal consequences
  - ✦ afraid that a positive urine screen will lead to discharge from the program
  - ✦ anxious about starting on a controlled substance
  - ✦ afraid to go into withdrawal and be sick in the waiting room, doctor's office, or group
  - ✦ embarrassed to ask for help or have internalized stigma
  - ✦ not sure where to even start to ask for help
- ✦ Patients may lack...
  - ✦ insurance for treatment
  - ✦ transportation

# What did we do about it? (take two)

## **Mission:**

To reduce opioid-related deaths by improving access to treatment

## **Objectives:**

1. Immediate engagement and medication induction
2. Reduce stigma associated with traditional opioid treatment
3. Eliminate barriers to accessing treatment
4. Establish trusting relationships through peer support
5. Maintain lowest possible threshold for medication induction

Therapy Dog

# M.A.T.T. van locations

☀️ Milford, CT – shelter

☀️ West Haven, CT – city green

☀️ New Haven, CT – city green

# M.A.T.T. Van Process

- ☀ Van is brightly colored
- ☀ Recovery coaches take the lead
- ☀ No appointment or insurance needed
- ☀ Addiction-focused interview
- ☀ No urine toxicology; CTPMP is checked
- ☀ Unobserved inductions
- ☀ Buprenorphine prescribed electronically from van and can be delivered to van or home or picked up
- ☀ Enough meds are given to last until intake; if that's more than 1 week, they come back to the van
- ☀ Rapid referrals to agency in client's area
- ☀ Recovery coaches maintain contact for 3 months
- ☀ Texting is encouraged

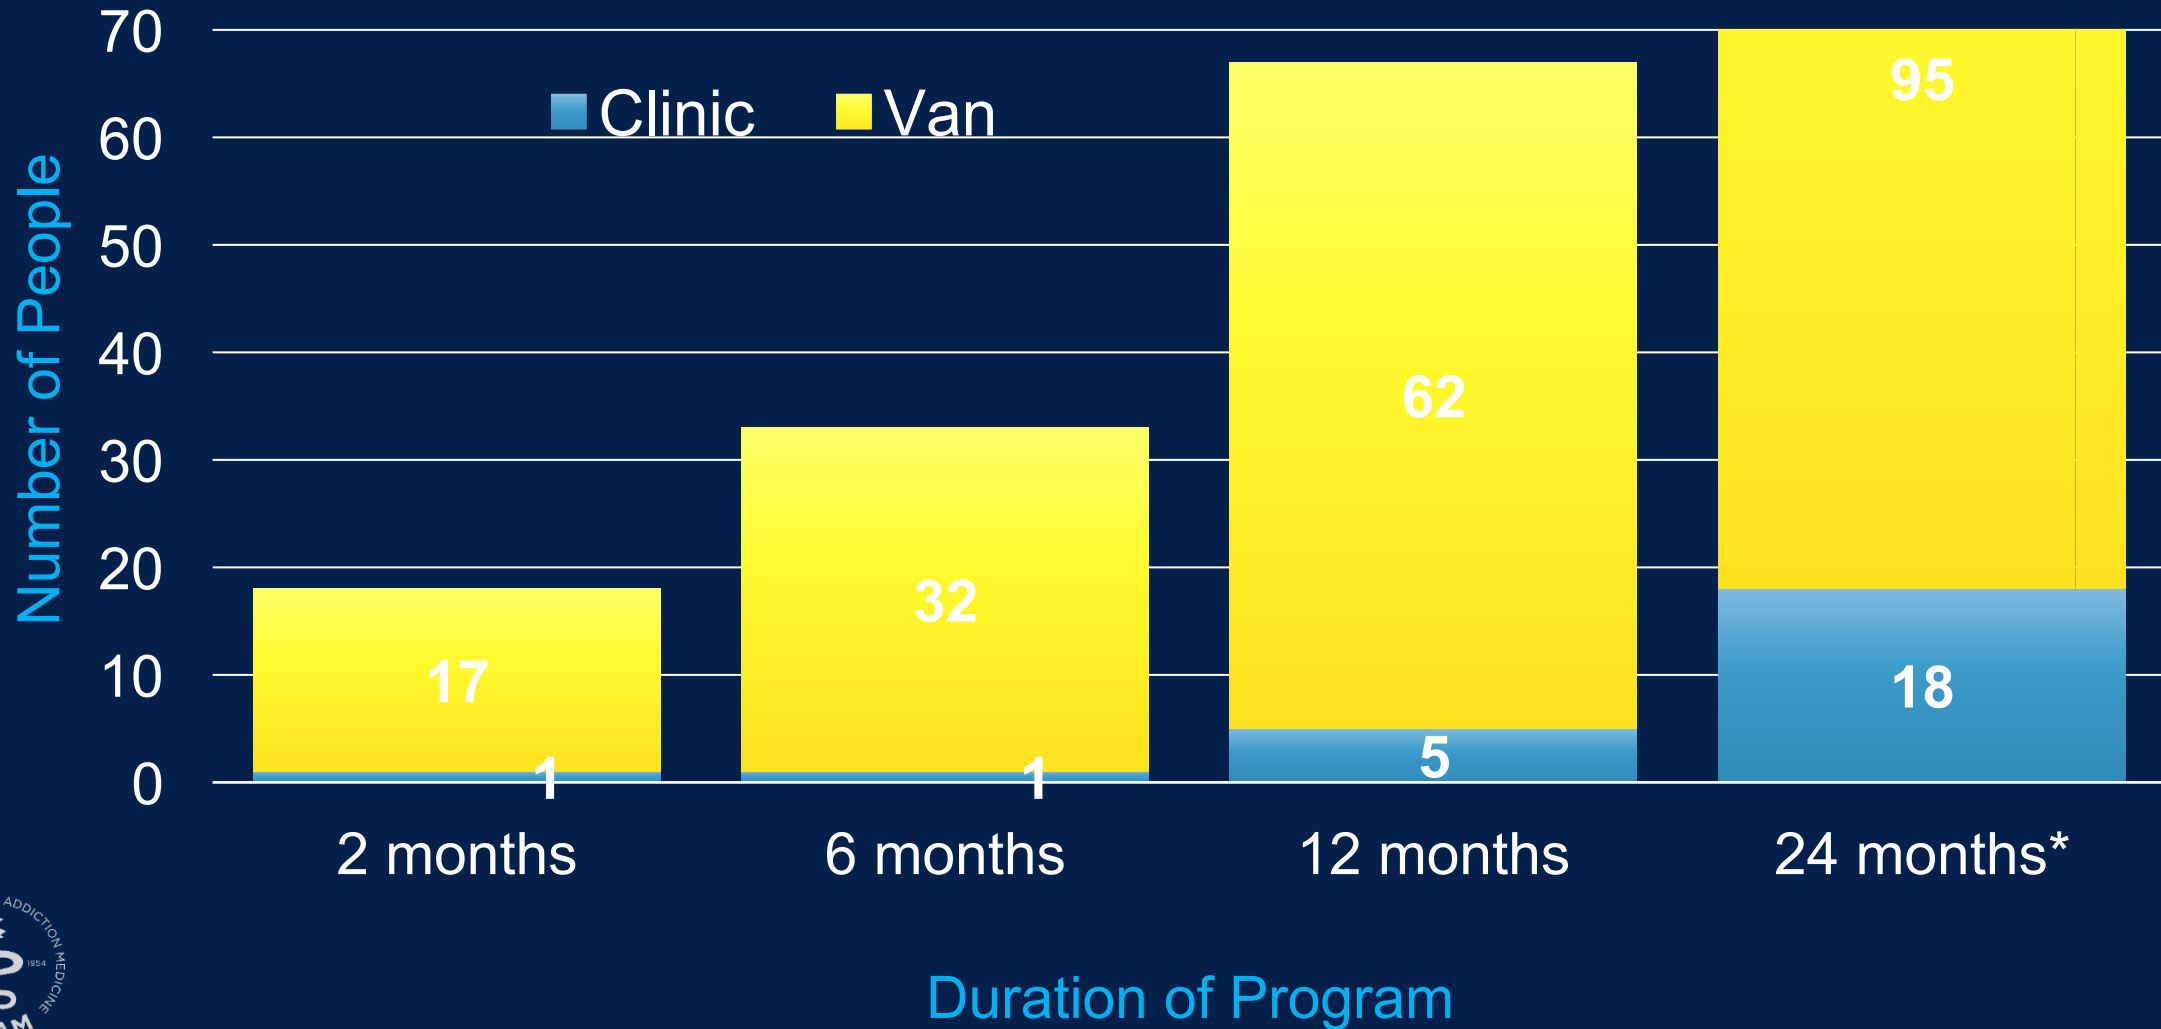

NOT for ongoing treatment

# Results: April 2019 – December 2020

- ☀ 90 people started on medication
- ☀ 62% kept their scheduled intake appointment
- ☀ 66% were still in treatment at 1 month
- ☀ 46% were still in treatment at 3 months

# Results: Route of Accessing Treatment

# Results: Special Stories at Bridges

- ☀️ 8 people have more than 1 year of recovery
- ☀️ 5 more are in their 6th month of recovery
- ☀️ A van client started a local Narcotics Anonymous group

# Summary

Next steps:

- ☀ Work with Department of Corrections
- ☀ Start a syringe service program
- ☀ Expand hours and locations
- ☀ Advocate for reimbursement of peer hours

Take-home messages:

- ☀ Mobile inductions are safe, effective, and necessary
- ☀ One size does not fit all
- ☀ It's already happening!
